a) if (head == NULL)

{

head = newnode;

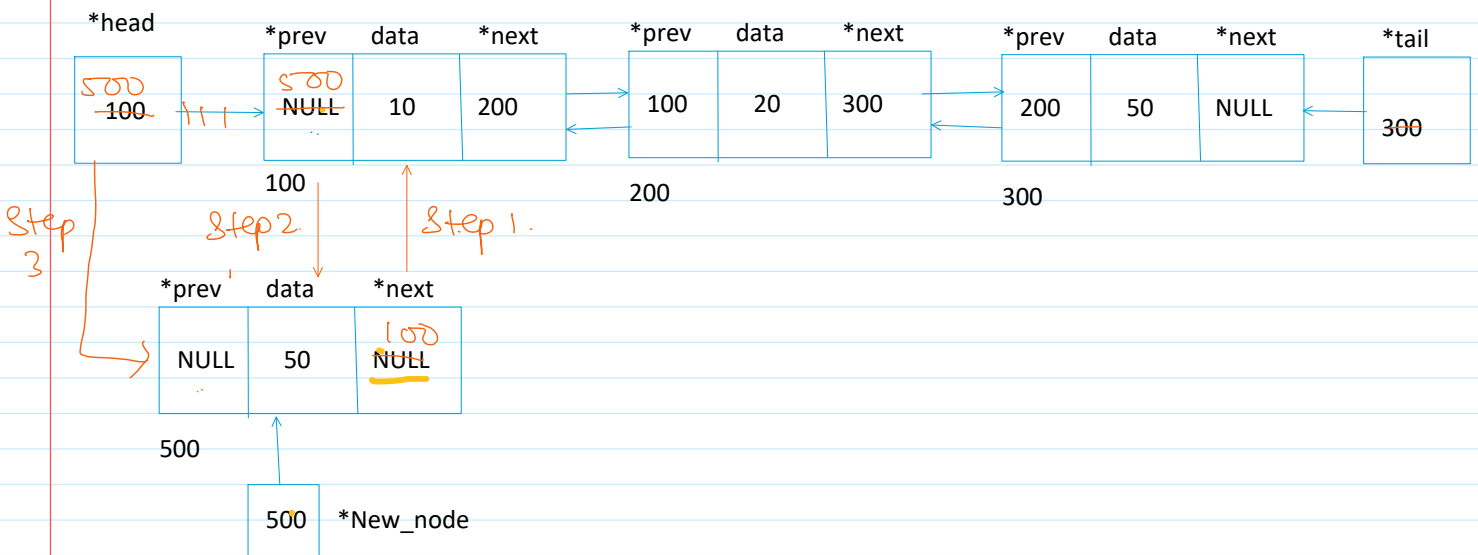

tail = newnode;

}

① Create node

② Attach.

① Attach the newnode to 1st node.

newnode → next = head;

② Attach the 1st node to newnode.

head → prev = newnode;

③ update the head pointer to point to newnode.

head = newnode;

Display () → forward.

Struct node *trav = head;

```
while(trav != NULL)
{
    printf("%d", trav->data);
    trav = trav->next;
}
```

Display () → backward.

Struct node *trav = tail;

```
while(trav != NULL)
{
    print
    trav = trav->prev;
}
```
